Course challenge

Latest Submission Grade 100%

1. Scenario 1, Questions 1-7

1/1 point

For the past six months, you have been working for a direct-mail marketing firm as a junior marketing analyst. Direct mail is advertising material sent to people through the mail. These people can be current or prospective customers, clients, or donors. Many charities depend on direct mail for financial support.

Your company, Directly Dynamic, creates direct-mail pieces with its in-house staff of graphic designers, expert mail list services, and on-site printing. Your team has just been hired by a local nonprofit. Food Justice Rock Springs. The mission of Food Justice Rock Springs is to eliminate food deserts by establishing local gardens, providing mobile pantries, educating residents, and more. Click below to read the email from Tayen Bell, vice president of marketing and outreach.

C5 Course Challenge, Email From Tayen Bell, Directly Dynamic .pdf

You begin by reviewing the dataset. To use the template for this dataset, click the link below and select "Use

Link to template: Dynamic Dataset

Or, if you don't have a Google account, download the file directly from the attachment below.

Dynamic Dataset

The client has asked you to send two separate mailings: one to people within 50 miles of Rock Springs; the other anyone outside that area. So, to research each donor's distance from the city, you first need to find out where all of these people live.

You could scroll through 209 rows of data, but you know there is a more efficient way to organize the cities.

Which of the following functions will enable you to sort your spreadsheet by city (Column K) in ascending

- =SORT(A2:R210, 11, ASC)
- SORT(A2:R210, 11, TRUE)
- =SORT(A2:R210, K, TRUE)
- =SORT(A2:R210, K, ASC)

To sort your spreadsheet by city in ascending order, use the SORT function syntax = SORT(A2:R210, 11, TRUE). You can also select A2-R210, then use the drop-down menu to Sort Sheet by Column K from A to Z.

2. Scenario 1, continued

1/1 point

You notice that many cells in the city column, Column K, are missing a value. So, you use the zip codes to researchthe correct cities. Now, you want to add the cities to each donor's row. However, you are concerned about making

What spreadsheet tool allows you to control what can and cannot be entered in your worksheet in order to avoid typos?

- ∨LOOKUP
- Data validation
- Find
- O List

Data validation allows you to control what can and cannot be entered in your worksheet in order to avoid typos. It does this by adding drop-down lists with predetermined options, such as each city name.

1/1 point

Now, you decide to address Tayen's request to include a handwritten note in the direct-mail piece for anyone who

Which of the following spreadsheet tools will enable you to change how cells appear if they contain a value of \$100 or more?

- The COUNTA function
- The MAX function
- O Data validation
- Conditional formatting

To change how cells appear, use conditional formatting. Choose to format cells if they are greater than or equal to 100.

4.	Scenario 1, continued	1/1 point
	At this point, you notice that the information about state and zip code is in the same cell. However, your	
	company's mailing list software requires states to be on a separate line from zip codes.	
	To move the 5-digit zip code in cell L2 into its own column, you use the function =LEFT(L2,5).	
	O True	
	False	
	Correct To move the 5-digit zip codes in Column L into their own column, you use the RIGHT function:	
	=RIGHT(L2,5).	
5.	Scenario 1, continued	1/1 point
	Next, you duplicate your dataset twice using the Sheet Menu. You rename the first sheet Donation Form List, and	
	you remove the cities that are further than 50 miles from Rock Springs. You rename the second sheet Postcard List, and you remove the cities that are within 50 miles of Rock Springs.	
	Then, you import these datasets into your company's mailing list database. In a mailing list database, you create	
	two tables: Donation_Form_List and Postcard_List. You decide to clean the Donation_Form_List first.	
	Your company's mailing list software requires units to be on the same line as street addresses. However, they are currently in two separate columns (street address and unit)	
	currently in two separate columns (street_address and unit).	
	What portion of your SQL statement will instruct the database to combine these two columns into a new column called "address"?	
	CONCAT(street_address, " to ", unit) AS address	
	O CONCAT(street_address to unit) AS address	
	O JOIN(street_address, " to ", unit) AS address	
	○ JOIN(street_address to unit) AS address	
	✓ Correct	
	The portion of your SQL statement used to instruct the database to combine these two columns into a	
	new column called "address" is CONCAT(street_address, " to ", unit) AS address.	
6.	Scenario 1, continued	1/1 point
	Your database contains people who live in many areas of Wyoming, However, it's important to align your in-house	
	data with the data from Food Justice Rock Springs. You also need to separate your data into the two lists:	
	Donation_Form_List and Postcard_List. They will be based on each city's distance from Rock Springs.	
	The zip codes are in a column called zip_code. To select all data from the Donation_Form_List organized by zip code, you use the ORDER BY function. The syntax is:	
	zip code, you use the ORDER BY function. The syntax is:	
	zip code, you use the ORDER BY function. The syntax is: SELECT *	
	zip code, you use the ORDER BY function. The syntax is: SELECT * FROM Donation_Form_List	
	zip code, you use the ORDER BY function. The syntax is: SELECT * FROM Donation_Form_List ORDER BY zip_code	
	zip code, you use the ORDER BY function. The syntax is: SELECT * FROM Donation_Form_List ORDER BY zip_code True	
	zip code, you use the ORDER BY function. The syntax is: SELECT * FROM Donation_Form_List ORDER BY zip_code © True False	
	zip code, you use the ORDER BY function. The syntax is: SELECT * FROM Donation_Form_List ORDER BY zip_code True False Correct To organize your data by zip code, the correct query is: SELECT *	
	zip code, you use the ORDER BY function. The syntax is: SELECT * FROM Donation_Form_List ORDER BY zip_code © True O False O Correct To organize your data by zip code, the correct query is:	
	zip code, you use the ORDER BY function. The syntax is: SELECT * FROM Donation_Form_List ORDER BY zip_code True False correct To organize your data by zip code, the correct query is: SELECT * FROM Donation_Form_List	
	zip code, you use the ORDER BY function. The syntax is: SELECT * FROM Donation_Form_List ORDER BY zip_code True False correct To organize your data by zip code, the correct query is: SELECT * FROM Donation_Form_List	
7.	zip code, you use the ORDER BY function. The syntax is: SELECT * FROM Donation_Form_List ORDER BY zip_code True False correct To organize your data by zip code, the correct query is: SELECT * FROM Donation_Form_List	1/1 point
7.	zip code, you use the ORDER BY function. The syntax is: SELECT * FROM Donation_Form_List ORDER BY zip_code True False correct To organize your data by zip code, the correct query is: SELECT * FROM Donation_Form_List ORDER BY zip_code Scenario 1, continued You finish cleaning your datasets, so you decide to review Tayen's email one more time to make sure you	1/1 point
7.	zip code, you use the ORDER BY function. The syntax is: SELECT * FROM Donation_Form_List ORDER BY zip_code True False correct To organize your data by zip code, the correct query is: SELECT * FROM Donation_Form_List ORDER BY zip_code Scenario 1, continued You finish cleaning your datasets, so you decide to review Tayen's email one more time to make sure you completed the task fully. It's a good thing you checked because you forgot to identify people who have served on	1/1 point
7.	zip code, you use the ORDER BY function. The syntax is: SELECT * FROM Donation_Form_List ORDER BY zip_code True False correct To organize your data by zip code, the correct query is: SELECT * FROM Donation_Form_List ORDER BY zip_code Scenario 1, continued You finish cleaning your datasets, so you decide to review Tayen's email one more time to make sure you	1/1 point
7.	zip code, you use the ORDER BY function. The syntax is: SELECT * FROM Donation_Form_List ORDER BY zip_code True False Correct To organize your data by zip code, the correct query is: SELECT * FROM Donation_Form_List ORDER BY zip_code Scenario 1, continued You finish cleaning your datasets, so you decide to review Tayen's email one more time to make sure you completed the task fully. It's a good thing you checked because you forgot to identify people who have served on the board of directors or board of trustees. She wants to write them a thank-you note, so you need to locate them in the database. To retrieve only those records that include people who have served on the board of trustees or on the board	1/1 point
7.	zip code, you use the ORDER BY function. The syntax is: SELECT * FROM Donation_Form_List ORDER BY zip_code © True ○ False ○ Correct To organize your data by zip code, the correct query is: SELECT * FROM Donation_Form_List ORDER BY zip_code Scenario 1, continued You finish cleaning your datasets, so you decide to review Tayen's email one more time to make sure you completed the task fully. It's a good thing you checked because you forgot to identify people who have served on the board of directors or board of trustees. She wants to write them a thank-you note, so you need to locate them in the database. To retrieve only those records that include people who have served on the board of trustees or on the board of directors, what clause do you include in your query?	1/1 point
7.	zip code, you use the ORDER BY function. The syntax is: SELECT * FROM Donation_Form_List ORDER BY zip_code © True False © Correct To organize your data by zip code, the correct query is: SELECT * FROM Donation_Form_List ORDER BY zip_code Scenario 1, continued You finish cleaning your datasets, so you decide to review Tayen's email one more time to make sure you completed the taskfully. It's a good thing you checked because you forgot to identify people who have served on the board of directors or board of trustees. She wants to write them a thank-you note, so you need to locate them in the database. To retrieve only those records that include people who have served on the board of trustees or on the board of directors, what clause do you include in your query? © WHERE Board_Member = "TRUE" OR Trustee= "TRUE"	1/1 point
7.	zip code, you use the ORDER BY function. The syntax is: SELECT * FROM Donation_Form_List ORDER BY zip_code Inue False Correct To organize your data by zip code, the correct query is: SELECT * FROM Donation_Form_List ORDER BY zip_code Scenario 1, continued You finish cleaning your datasets, so you decide to review Tayen's email one more time to make sure you completed the taskfully. It's a good thing you checked because you forgot to identify people who have served on the board of directors or board of trustees. She wants to write them a thank-you note, so you need to locate them in the database. To retrieve only those records that include people who have served on the board of trustees or on the board of directors, what clause do you include in your query? WHERE Board_Member = "TRUE" OR Trustee = "TRUE" WHERE Board_Member = "TRUE" AND Trustee = "TRUE"	1/1 point
7.	zip code, you use the ORDER BY function. The syntax is: SELECT * FROM Donation_Form_List ORDER BY zip_code Inue False Correct To organize your data by zip code, the correct query is: SELECT * FROM Donation_Form_List ORDER BY zip_code Select * FROM Donation_Form_List ORDER BY zip_code Senario 1, continued You finish cleaning your datasets, so you decide to review Tayen's email one more time to make sure you completed the task fully. It's a good thing you checked because you forgot to identify people who have served on the board of directors or board of trustees. She wants to write them a thank you note, so you need to locate them in the database. To retrieve only those records that include people who have served on the board of frustees or on the board of directors, what clause do you include in your query? WHERE Board_Member = "TRUE" OR Trustee = "TRUE" WHERE Board_Member = "TRUE" AND Trustee = "TRUE"	1/1 point
7.	zip code, you use the ORDER BY function. The syntax is: SELECT * FROM Donation_Form_List ORDER BY zip_code Inue False Correct To organize your data by zip code, the correct query is: SELECT * FROM Donation_Form_List ORDER BY zip_code Scenario 1, continued You finish cleaning your datasets, so you decide to review Tayen's email one more time to make sure you completed the taskfully. It's a good thing you checked because you forgot to identify people who have served on the board of directors or board of trustees. She wants to write them a thank-you note, so you need to locate them in the database. To retrieve only those records that include people who have served on the board of trustees or on the board of directors, what clause do you include in your query? WHERE Board_Member = "TRUE" OR Trustee = "TRUE" WHERE Board_Member = "TRUE" AND Trustee = "TRUE"	1/1 point
7.	zip code, you use the ORDER BY function. The syntax is: SELECT * FROM Donation_Form_List ORDER BY zip_code Inue False Correct To organize your data by zip code, the correct query is: SELECT * FROM Donation_Form_List ORDER BY zip_code Scenario 1, continued You finish cleaning your datasets, so you decide to review Tayen's email one more time to make sure you completed the task fully. It's a good thing you checked because you forgot to identify people who have served on the board of directors or board of trustees. She wants to write them a thank you note, so you need to locate them in the database. The syntax is: SELECT * FROM Donation_Form_List ORDER BY zip_code True False correct To organize your data by zip code, the correct query is: SELECT * FROM Donation_Form_List ORDER BY zip_code Scenario 1, continued You finish cleaning your datasets, so you decide to review Tayen's email one more time to make sure you completed the task fully. It's a good thing you checked because you forgot to identify people who have served on the board of directors or board of trustees. She wants to write them a thank you note, so you need to locate them in the database. To retrieve only those records that include people who have served on the board of trustees or on the board of directors, what clause do you include in your query? WHERE Board_Member = "TRUE" OR Trustee = "TRUE" WHERE Board_Member = TRUE, Trustee = TRUE" WHERE Board_Member = TRUE, Trustee = TRUE WHERE Board_Member = TRUE, Trustee = TRUE WHERE Board_Member = TRUE, Trustee = TRUE Correct To retrieve only those records that include people who have served on the board of trustees or on the board of directors, the correct query is: SELECT * FROM Donation_Form_List	1/1 point
	zip code, you use the ORDER BY function. The syntax is: SELECT * FROM Donation_Form_List ORDER BY zip_code True False correct To organize your data by zip code, the correct query is: SELECT * FROM Donation_Form_List ORDER BY zip_code Scenario 1, continued You finish cleaning your datasets, so you decide to review Tayen's email one more time to make sure you completed the task fully. It's a good thing you checked because you forgot to identify people who have served on the board of directors or board of trustees. She wants to write them a thank you note, so you need to locate them in the database. To retrieve only those records that include people who have served on the board of trustees or on the board of directors, what clause do you include in your query? WHERE Board_Member = "TRUE" OR Trustee = "TRUE" WHERE Board_Member = TRUE, Trustee = TRUE" WHERE Board_Member = TRUE, Trustee = TRUE WHERE Board_Member = TRUE, Trustee = TRUE WHERE Board_Member = TRUE, Trustee = TRUE Correct To retrieve only those records that include people who have served on the board of trustees or on the board of directors, the correct query is: SELECT * FROM Donation_Form_List	1/1 point
	zip code, you use the ORDER BY function. The syntax is: SELECT * FROM Donation_Form_List ORDER BY zip_code ● True	

numbers. This will enable you to clean and organize the lists more effectively.

Meanwhile, another team member has been creating a prospect list that contains data about people who have indicated interest in getting involved with Food Justice Rock Springs. These people are also assigned a unique ID. Now, you need to compare your donor list with the dataset in your database and collect certain data from both.

● INNER JOIN	
○ RIGHT JOIN	
OUTERJOIN	
O LEFT JOIN	
⊘ Correct	
An INNER JOIN function will return records with matching values in both tables.	
9. Scenario 2, continued	1/1 point
Your next task is to identify the average contribution given by donors over the past two years. Tayen will use this	
information to set a donation minimum for inviting donors to an upcoming event.	
You have performed the calculations for 2019, so now you move on to 2020. To return average contributions in 2020 (contributions 2020), you use the AVG function. You use the following section of a SQL query to find	
this average and store it in the AvgLineTotal variable:	
AVG(contributions_2020) AS AvgLineTotal	
⊙ True	
○ False	
⊙ Correct	
To return average contributions in 2020, the correct portion of the SQL query is:	
AVG(contributions_2020) AS AvgLineTotal	
10. Scenario 2, continued	1/1
	1/1 point
Now that you provided her with the average donation amount, Tayen decides to invite 50 people to the grand opening of a new community garden. You return to your New Donor List spreadsheet to determine how much	
each donor gave in the past two years. You will use that information to identify the 50 top donors and invite them to the event.	
What syntax adds the contribution amounts in cells O2 and P2? Select all that apply.	
✓ =02+P2	
To add cells O2 and P2, use the function =SUM(02,P2). You can also use the formula =02+P2.	
□ =02,P2	
☐ =(O2/P2)	
✓ =SUM(02,P2)	
⊘ Correct	
To add cells O2 and P2, use the function =SUM(O2,P2). You can also use the formula =O2+P2.	
11. Scenario 2, continued	1/1 point
Tayen informs you that she's thinking about inviting anyone who donated at least \$100 in 2018, as well. However,	
she only has five open spaces. She asks you to report how many people gave at least \$100 so she can determine if they can also be invited to the event.	
The correct syntax to count how many donations of \$100 or greater appear in Column 0 is	
=SUMIF(02:0210,">=100").	
○ True	
● False	
○ Correct To count how many donations of \$100 or greater appear in Column 0, the correct contavir.	
To count how many donations of \$100 or greater appear in Column O, the correct syntax is =COUNTIF(O2:0210,">=100").	
12. Scenario 2, continued	1/1 point
The community garden grand opening was a success. In addition to the 55 donors Food Justice Rock Springs invited, 20 other prospects attended the event. Now, Tayen wants to know more about the donations that came in	
from new prospects compared to the original donors.	
This SQL query can be used to identify the percentage of contributions from prospects compared to total donors:	
SELECT	
event_contributions,	
Total_donors, Total_prospects,	
(Total_prospects / Total_donors * 100) AS Prospects_Percent	
FROM contributions_data	
True	
○ False	
⊘ Correct	
The correct query is:	
SELECT	
<pre>event_contributions, Total_donors,</pre>	
Total_prospects, (Total_prospects / Total_donors * 100) AS Prospects_Percent	
FROM contributions data	

13. Scenario 2, continued 1/1 point

Your team creates a highly effective prospects list for Food Justice Rock Springs. After a few months, many of these prospects become donors. Now, Tayen wants to know the top three cities in which these new donors live. She will use that information to determine if it's still true that people who live closer to Rock Springs are more

Which SQL query will retrieve the number of donors in each city, sorted high to low?

O SELECT COUNT(DonorID), City
FROM new_donor_list
GROUP BY COUNT
ORDER BY City (DonorID) DESC

O SELECT City(DonorID), City
FROM new_donor_list
GROUP BY COUNT
ORDER BY City(DonorID) ASC

SELECT COUNT(DonorID), City FROM new_donor_list GROUP BY City ORDER BY COUNT(DonorID) DESC

O SELECT COUNT(DonorID), City
FROM new_donor_list
GROUP BY City
ORDER BY COUNT(DonorID) ASC

⊘ Correct

To retrieve the number of donors in each city, sorted high to low, the correct SQL query is:

1. The second of t

SELECT COUNT(DonorID), City
FROM new_donor_list
GROUP BY City
ORDER BY COUNT(DonorID) DESC
