Test your knowledge on converting and formatting data

Total points 3

1. A spreadsheet cell contains the coldest temperature ever recorded in New Zealand: -22 °Celsius. What function will display that temperature in Fahrenheit?

   1 / 1 point

   ○ =CONVERT(-22, C, F)

   ○ =CONVERT(-22, "F", "C")

   ○ =CONVERT(-22, F, C)

   ● =CONVERT(-22, "C", "F")

   ✓ **Correct**
   =CONVERT(-22, "C", "F") will display -22 °C in Fahrenheit.

2. A data analyst wants to ensure spreadsheet formulas continue to run correctly, even if someone enters the wrong data by mistake. Which data-validation menu option should they select to flag data entry errors?

   1 / 1 point

   ○ Remove Validation

   ○ Deny Help Text

   ○ Forbid Entry

   ● Reject Invalid Inputs

   ✓ **Correct**
   To ensure spreadsheet formulas continue to run correctly, even if someone enters the wrong data by mistake, select Reject Invalid Inputs to flag that data as invalid.

3. A data analyst clicks on the Format Cells in drop-down menu and selects the option Text Is Exactly November. This changes the color of all the cells that contain the word November. What spreadsheet tool is the analyst using?

   1 / 1 point

   ○ CONVERT

   ○ Filtering

   ○ Data validation

   ● Conditional formatting

   ✓ **Correct**
   The data analyst is using conditional formatting. Conditional formatting is a spreadsheet tool that changes how cells appear when values meet specific conditions.
